CLP1780621

Mr.

Anderson Kilandamoko

Laboratory Quality Engineer

LA PULPE

France-.

Dear client,

In reference to the claim referred "We carried out analyzes by a specialized laboratory on vegetal extract in every tuna product. Results for this product is non-compliant. As you can see the Analyse Report, which is enclosed, there is presence of pea fiber and starch, these two components are mentioned nowhere on the packaging or label."

Lot: LQ08YNCPP5 G201/21G.05GUM 23 :54

Brand: La Pulpe

Salica del Ecuador does not use vegetable broth or any other food additive in canned or pouched tuna for European market, however after counter-samples check we have found a possibility of cross contamination due to an accidental mishandling of a new operator of different valves of media tanks. We have identified a safety period of time (22h00 to 00:00) that could affect 313 cases of this SKU.

Several corrective actions have been taken, such as:

- Re training of Media preparation and mixing operators
- Improving of Media pipes system identification

Please accept our apologizes for this issue and feel to contact us if you have any questions or any information request.

Best regards,

Lucciola López
Chief of Quality
