**Asunto:** FW: IMP 45940 Admiral brand Pouch Flaked Tuna 1.22kg - Drained Weight  
**Importancia:** Alta

We are done with Shafer. I don't think Salica's QC department is good enough to make the pouches required for the Canadian market.

**Subject:** IMP 45940 Admiral brand Pouch Flaked Tuna 1.22kg - Drained Weight

**Importance:** High

Hi Josh,

We've received the drained weight results from the 3<sup>rd</sup> party lab for the above IMP and are very disappointed to see that drained weight again failed. Averaged drained weight is 1165.6g (below declared 1180g) with total of 7 outliers out of 13 samples, which is actually worse than the previous 2 Imps that failed. We may need to sticker at a lower drained weight but will need to do a 2<sup>nd</sup> inspection to determine appropriate drained weight to declare.

Can you review processing records for this IMP? We were expecting this IMP to have better drained weights than previous, as we anticipated corrective actions would already have been applied after the previous failed DWs.

Thank you,  
Joy
